PROJECT REPORT

Digital Literacy

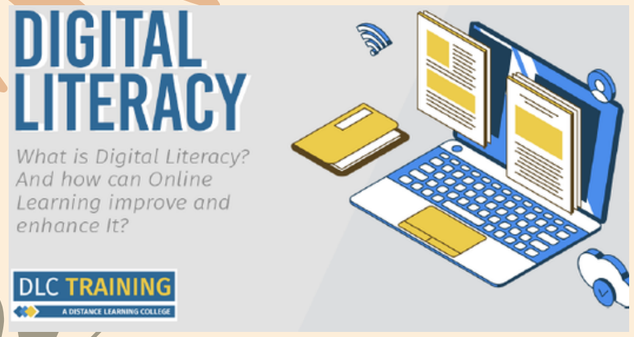
NAME-ARUN YADAV

REG. NO.-25BC11308

DATE-31ST MARCH 2026

INSTITUTION-VIT BHOPAL UNIVERSITY

INTRODUCTION



Digital literacy is the ability to use digital tools and technologies in a smart, responsible, and effective way. In today's world, especially for college students, it is an essential skill as we rely on the internet for studying, researching, and communication. It is not just about knowing how to use devices, but also about understanding how to find reliable information, think critically, and behave appropriately online. Developing digital literacy helps us become more confident and responsible users of technology, both in academics and everyday life.

Task 1 - Presentation

I used Canva to design a one-page infographic on digital literacy because it is very easy to use and offers many ready-made templates and design elements. In my design, I explained what digital literacy means and why it is important for students. I also included topics like safe internet practices, useful digital tools, and email etiquette, keeping the content simple and easy to understand.

While working on this, I found it interesting how using colors, icons, and layout can make information more engaging and visually appealing. At the same time, it was a bit challenging to fit all the important points into a single page without making it look too crowded. Overall, it was a fun and creative experience, and I learned how to present information in a clear and attractive way.

Task 2 - Portfolio

For this task, I created profiles on GitHub, LinkedIn, and Kaggle to build my professional digital presence. GitHub is useful for sharing and managing coding projects, LinkedIn helps in connecting with professionals and showcasing achievements, and Kaggle is great for practicing data science and working with real datasets. I updated my GitHub profile with a README and filled in my education details on LinkedIn.

Over the next four years, I plan to regularly upload projects on GitHub, stay active on LinkedIn, and use Kaggle to improve my skills. I feel these platforms will help me grow and create better opportunities for internships and future careers.

Task 3 -Platforms

Part-A Coding Practice

For the technical part of this module, I used HackerRank to improve my basic programming skills. I worked on a beginner-level problem that required logical thinking and writing correct code to pass all the test cases. This helped me understand how such platforms evaluate solutions automatically and gave me a feel of real coding challenges.

I also realized that platforms like HackerRank are widely used in technical interviews and competitive coding. Practicing here will help me get better at problem-solving and prepare for future internships during my B.Tech. As a Student Digital Ambassador, this experience also allows me to guide my classmates toward useful platforms where they can practice and improve their coding skills.

Task-3-Platforms

Part-B-Google Workspace Collaboration

To demonstrate digital collaboration, I used Google Workspace to create a “Digital Literacy Awareness Quiz” using Google Forms. The quiz includes five questions, with a mix of multiple-choice and short-answer types, to check how well my classmates understand safe online practices. I also linked it to a Google Sheet so that all responses are collected and organized automatically in real time.

Working on this helped me understand how useful these tools are for teamwork and managing data easily. It felt more like a practical task rather than just an assignment, because I can actually use this quiz with my batchmates. As a Student Digital Ambassador, this will help me spread awareness and encourage others to use the internet more safely and responsibly.

Task-4-Email & etiquettes

PART-A-PROFESSIONAL EMAILS

YourEmail etiquette is an important part of maintaining professional communication in both academic and professional settings. A well-written email should always have a clear and concise subject line so the recipient immediately understands its purpose.
The body of the email should be polite and professional, especially when making requests like assignment extensions or applying for internships. Using proper grammar and ending with a courteous sign-off such as “Sincerely” or “Best regards,” along with your full name and registration number, helps keep the communication respectful and professional.

Task-4-Email & etiquettes

PART-B-Etiquettes

In the professional world, even a small mistake in an email can lead to serious consequences. For example, imagine a student asking for an assignment extension but sending a last-minute, informal email without a subject line, proper details, or a clear reason. Because the message lacks clarity and professionalism, the professor may ignore it, and the student could end up missing the deadline.

- To avoid this, the student should follow proper email etiquette. Sending the request in advance with a clear subject line like “Extension Request – [Name] – [Reg No]” and writing a polite, well-structured message would make a big difference. This shows that a simple, clear, and professional email is much more effective than a rushed or poorly written one.
-

TASK-5-CYBERCRIME

- **What Surprised Me**

The most surprising realization for me was that identity theft is not always a big, dramatic hack but often happens in small pieces. Attackers can collect bits of information like a birthdate, partial address, or phone number from different sources and combine them to create a complete profile. This made me understand how even small details we share casually can lead to serious security risks.

- **One Habit I Will Change**

I will start practicing strict data minimization by sharing only the necessary personal information online. Instead of filling every field for convenience, I will be more careful and provide only what is required. This way, I can better protect my personal data and reduce the risk of misuse.

Conclusion

The completion of this project has helped me understand the balance between technical skills and being responsible online. Through different tasks like setting up profiles on GitHub and LinkedIn and learning about cybercrime, I got a clearer idea of how the digital world works. One key learning for me was how identity theft happens—not always through big hacks, but by collecting small pieces of personal information and misusing them.

By creating things like a Google Form quiz and a digital safety infographic, I was able to share this knowledge in a practical way. Overall, I realized that digital literacy is not just about using technology, but also about staying careful, protecting personal data, and being aware. This project has given me a strong base to build a safe and professional online presence in the future.
